| <b>Client:</b>          | United Harvest, Washington |
| <b>Year:</b>            | 2000                       |

### Detail Information

The loading chute is used for loading grain onto trucks. Because of the potential explosion risk all electrical equipment is UL approved for Class II Group G.

The chute is app. 18' long and equipped with internal guide cones in nylon. This construction ensures an optimal separation of material and exhausted air and therefore creates a nearly dust free loading.

The modular construction of the chute ensures easy modification and maintenance through quick replacement of single modules.

The loading chute is equipped with an TF outlet which gives the company the ability to load tanker trucks or flatbed trucks with the same chute.
